

KIT 0398

85039800210

U.S.S. CONSTITUTION

"OLD IRONSIDES"

READ THIS FIRST

At this point you have completed the Basic assembly of your Constitution. However, no sailing ship is complete without a minimum amount of Rigging. This usually is comprised of the Lines that locate and support the MASTS. Once rigged these lines become a structural part of the Ship. Once rigged they seldom, if ever required adjustment and were usually coated with tar to protect them from the elements. These lines are known as the STANDING RIGGING.

THE RUNNING RIGGING performs and entirely different function than the STANDING RIGGING, these are the working lines of the Ship, used to raise or lower the YARDS (HALYARDS), raise or lower the SAILS (CLEW SLINES), or trim them to the wind (SHEET LINES and BRACES). As they are in constant use they must remain in their natural state.

For this reason your kit contains two colors of thread and three sizes of each color. The Black is used for all the STANDING RIGGING and the Tan for all RUNNING RIGGING. The small size of each color is used for tying BLOCKS, BULLEYES, etc. The large size for the lower lines, and the medium size are generally used for the UPPER RIGGING in both colors.

The STANDING RIGGING must be rigged before THE RUNNING RIGGING. This consists of all the HEAD GEAR RIGGING, the RAT LINES and the FORE and BACK STAYS.

All lines must be rigged very carefully to avoid warping the MASTS out of alignment. Pull each line just tight enough to remove any slack – over tightening will cause other lines to go slack or perhaps bend the part you are tying to. Secure all ties with a small drop of cement, later when cement has set trim excess thread.

Rigging of your Model will be much easier if you pull each piece of THREAD as used, over a cake of Bee's wax or paraffin. This will prevent moisture from affecting the RIGGING as well as help prevent the THREAD ENDS from fraying when rigging through BLOCKS or EYEBOLTS.

Due to the complexity of rigging your ship, most of the illustrations will show only those lines on the FORE and AFT CENTER LINE of your ship, or those rigged on one side only. For each of these, a duplicate line must be rigged on the opposite side of the ship as well.

CUSTOMER SERVICE

If you have questions, comments or problems visit our website revell.com or write to us at:

Revell Inc. Consumer Service
1850 Howard St. Unit A
Elk Grove Village, IL 60007

Be sure to include this plan number (85039800210), part number, description and your return address and phone number.

LIRE CELA EN PREMIER

À ce point vous avez complété l'assemblage de base de votre Constitution. Cependant, aucun voilier n'est complet sans avoir une quantité minimale de gréement. Cela inclut habituellement les lignes qui placent et supportent les MÂTS. Une fois gréées, ces lignes deviennent une partie structurelle du navire. Une fois gréées, elles n'avaient que peu besoin d'ajustement, si besoin, et elles étaient habituellement enduites de goudron pour protéger contre les éléments. Ces lignes sont connues sous le nom de GRÉEMENT DORMANT.

LE GRÉEMENT COURANT occupe une fonction entièrement différente que le GRÉEMENT DORMANT, ce sont les lignes de travail du navire, utilisées pour soulever ou abaisser les VOILES (DRISSES), monter ou abaisser les VOILES (LIGNES DES POINTS D'ÉCOUTE), ou les aligner aux vents (LIGNES DE VOILES et ENTRETOISES). Puisqu'elles sont utilisées constamment, elles doivent rester dans leur état naturel.

C'est pour cette raison que votre ensemble contient deux couleurs de fil et trois tailles de chaque couleur. Le Noir est utilisé pour tous les GRÉEMENTS DORMANTS et les fils Havane pour tous les GRÉEMENTS COURANTS. La petite taille de chaque couleur est utilisée pour attacher les BLOCS, LES PITONS À Oeil, etc. Les grosses tailles pour les lignes inférieures, et les tailles moyennes sont généralement utilisées pour le GRÉEMENT SUPÉRIEUR des deux couleurs.

Le GRÉEMENT DORMANT doit être gréé avant le GRÉEMENT COURANT. Cela consiste de tous les GRÉEMENTS D'ÉQUIPEMENT DE TÊTE, les ENFLÉCHURES et les DRAILLES AVANT ET ARRIÈRE.

Toutes les lignes doivent être gréées très soigneusement pour éviter un gauchissement des MÂTS hors de leur alignement. Tendre chaque ligne juste assez pour retirer tout lâche – trop serrer fera en sorte que les autres lignes deviendront lâches ou même de plier la pièce sur laquelle vous l'attachez. Fixer toutes les fixations avec une petite goutte de colle, puis plus tard, quand la colle aura séchée, découper l'excès de fil.

Le gréement de votre modèle sera beaucoup plus facile si vous tirez chaque bout de FIL lors de l'usage, sur un pain de cire d'abeille ou de paraffine. Cela permettra d'éviter que la moisissure affecte le GRÉEMENT en plus d'aider à prévenir que les BOUTS DES FILS s'effritent lors du gréement au travers des BLOCS ou des PITONS À Oeil.

En raison de la complexité du gréement de votre navire, la plupart des illustrations ne montreront que ces LIGNES À L'AVANT, À L'ARRIÈRE ET AU CENTRE de votre navire, ou celles qui sont gréées seulement sur un côté. Pour chacune de ces lignes, une ligne dupliquée doit être gréée aussi sur l'autre côté du navire.

SERVICE À LA CLIENTÈLE

Pour toute question, problème ou commentaire, visitez-nous à l'adresse revell.com ou écrivez-nous à :

Revell Inc. Consumer Service

Assurez-vous d'inclure ce numéro de plan (85039800210), le numéro de pièce, une description ainsi que votre adresse de retour et numéro de téléphone.

LEA ESTO PRIMERO

En este punto, ha completado el montaje básico de su estructura. Sin embargo, ningún barco de vela está completo sin una mínima cantidad de aparejo. Esto generalmente se compone de las líneas que ubican y apoyan a los MÁSTILES. Una vez que estas líneas se aparejan, las mismas se convierten en una parte estructural del barco. Una vez aparejadas rara vez requieren de ajuste y por lo general se cubren con alquitran para protegerlas de los elementos. Estas líneas son conocidas como JARCIAS FIJAS.

LA JARCIA MÓVIL se desempeña y funciona completamente diferente a la JARCIA FIJA, estas son las líneas de trabajo de la nave, que se utilizan para subir o bajar los ASTILLEROS (DRIZAS), subir o bajar las VELAS (LÍNEAS DE OVILLO), o para recortarlas al viento (LÍNEAS DE HOJAS y BRAZAS). Como están en constante uso, deben permanecer en su estado natural.

Por esta razón, su equipo contiene dos colores de hilo y tres tamaños de cada color. El negro se utiliza para todas las JARCIAS FIJAS y el marrón para todas las JARCIAS MÓVILES. El tamaño pequeño de cada color se utiliza para amarrar los BLOQUES, DIANAS, etc. El tamaño grande de las líneas inferiores, y el tamaño mediano se utilizan generalmente para el APAREJO SUPERIOR en ambos colores.

LA JARCIA FIJA se debe conectar antes de la JARCIA MÓVIL. Consta de todos los APAREJOS SUPERIORES, los VAIVENES y los TENSORES DELANTEROS y TRASEROS.

Todas las líneas deben ser conectadas con mucho cuidado para evitar deformaciones de los MÁSTILES fuera de la alineación. Hale cada línea sólo lo suficiente para eliminar cualquier holgura - apretarla de manera excesiva hará que las otras líneas se aflojen o tal vez doblen la parte que está atando. Fije todos los amarres con una pequeña gota de pegamento, más tarde, cuando el cemento se haya secado, corte el hilo sobrante.

El aparejo de su modelo será mucho más fácil si hala cada trozo de HILO que se utiliza, sobre una torta de cera de abeja o parafina, esto evitara que la humedad afecte al APAREJO, así como ayudará a prevenir que los EXTREMOS DEL HILO se deshilachen cuando se pasen por los BLOQUES o ARGOLLAS.

Debido a la complejidad del aparejo de su barco, la mayoría de las ilustraciones mostrarán sólo las líneas en la LÍNEA CENTRAL de PROA a POPA de su barco, o las aparejadas en sólo un lado. Para cada una de ellas, una línea duplicada se debe aparejar en el lado opuesto del barco.

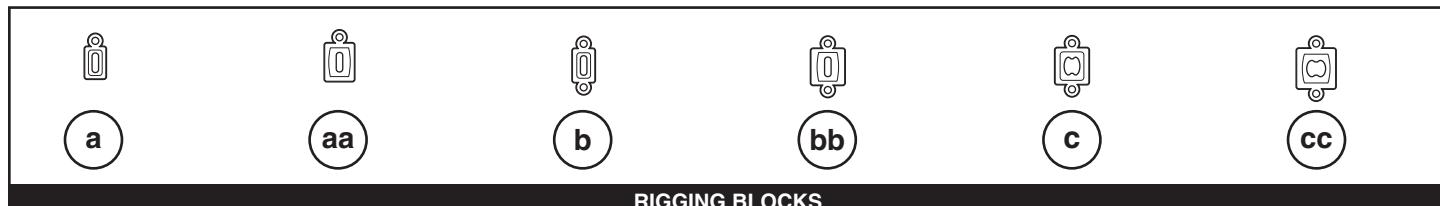

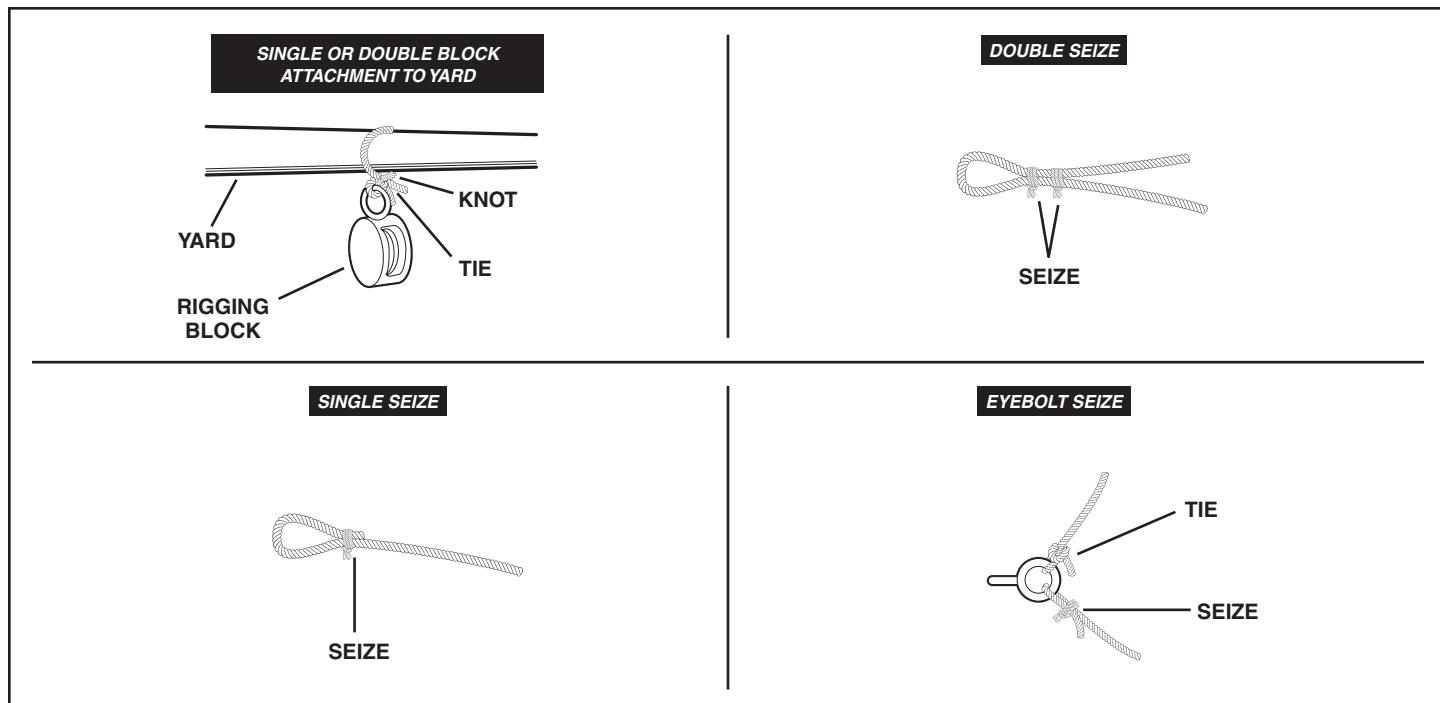

SERVICIO AL CLIENTE

TO PREVENT MISALIGNMENT OR WARPING THE MASTS, THE FORESTAY RIGGING SHOULD START WITH THE LOWER STAYS AT ALL THREE MASTS. START AT THE FOREMAST AND RIG THE LOWER FOUR STAYS, THEN TO THE MAINMAST FOUR LOWER STAYS, AND FINISH WITH THE Mizzenmast TWO LOWER STAYS. RIG LINES JUST TIGHT ENOUGH TO REMOVE SLACK. OVER TIGHTENING WILL RESULT IN MISALIGNMENT OF MASTS.

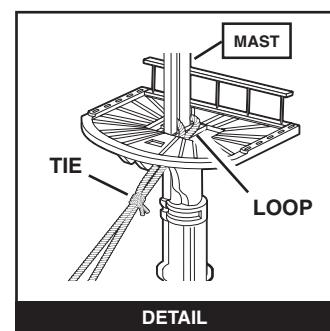

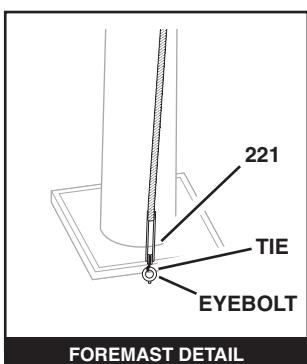

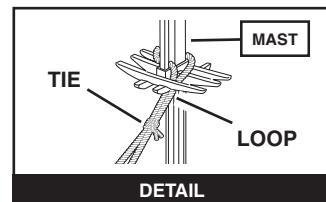

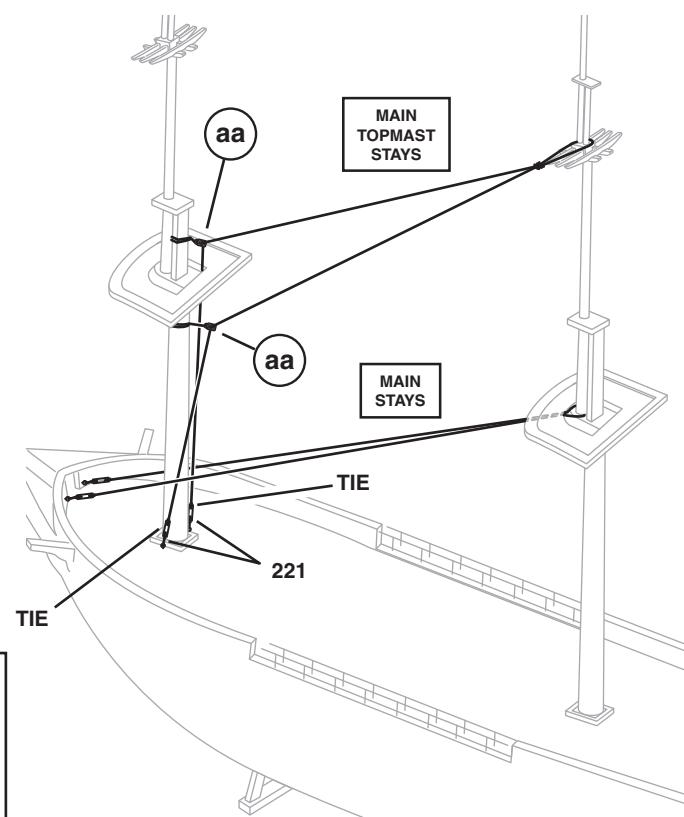

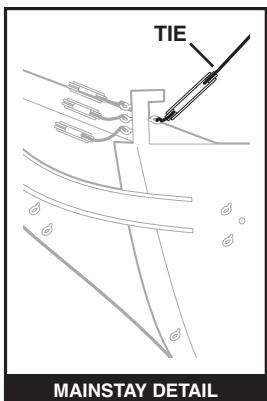

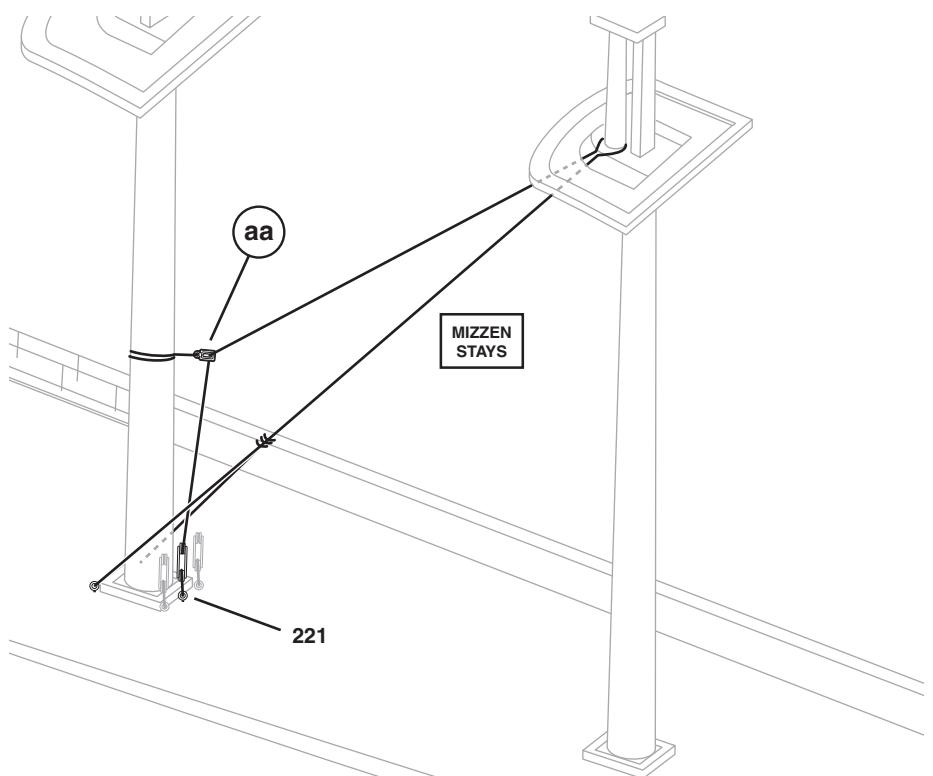

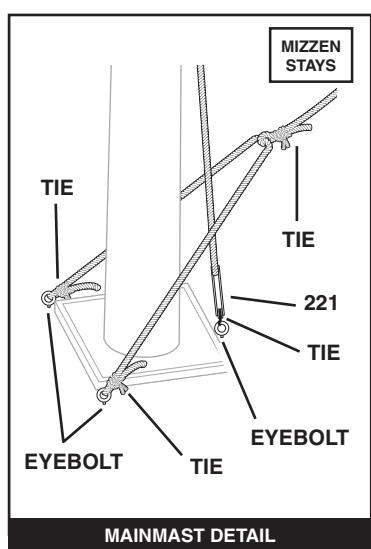

POUR PRÉVENIR UN MAUVAIS ALIGNEMENT OU UN GAUCHISSEMENT DES MÂTS, LE GRÉEMENT DU TOURMENTIN DOIT COMMENCER AVEC LA DRAILLE INFÉRIEURE À TOUS LES TROIS MÂTS. COMMENCER AU MÂT DE MISAINNE ET GRÉER LES QUATRE DRAILLES INFÉRIEURES, PUIS AUX QUATRE DRAILLES INFÉRIEURES DES MÂTS PRINCIPAUX, PUIS FINIR AVEC LES DEUX DRAILLES INFÉRIEURES DU MÂT D'ARTIMON. GRÉER LES LIGNES JUSTE ASSEZ SERRÉES POUR ÉLIMINER LE LÂCHE. UN SERRAGE TROP SERRÉ PEUT RÉSULTER EN MAUVAIS ALIGNEMENT DES MÂTS.

PARA EVITAR LA MALA ALINEACIÓN O DEFORMACIONES EN LOS MÁSTILES, EL APAREJO DEL PUNTAL DE PROA DEBE COMENZAR CON LOS TENSORES LATERALES INFERIORES EN TODOS LOS TRES MÁSTILES. COMIENCE EN EL TRINQUETE Y CONECTE LOS CUATRO TENSORES LATERALES INFERIORES, LUEGO EN EL MASTIL PRINCIPAL EN LOS CUATRO TENSORES LATERALES INFERIORES, Y TERMINE CON EL MÁSTIL DE MESANA EN LOS DOS TENSORES LATERALES INFERIORES. AMARRE LAS LÍNEAS SOLO LO SUFICIENTEMENTE AJUSTADAS PARA ELIMINAR LA COMBA. AMARRAR EN EXCESO RESULTARÁ EN LA ALINEACIÓN INCORRECTA DE LOS MÁSTILES.

IF YOU WISH TO GIVE THE SAILS A WEATHERED APPEARANCE APPLY A THIN DILUTED WASH OF LIGHT GRAY PAINT. USE SPARINGLY AS SOME THINNER MAY TEND TO CRACK THE PLASTIC. HIGHLIGHTS CAN BE OBTAINED BY DABBING AREAS WITH A SOFT CLOTH OR TISSUE BEFORE PAINT HAS DRIED. USE THE EXCESS MATERIAL AROUND THE SAILS TO EXPERIMENT WITH IN OBTAINING THE DESIRED EFFECT.

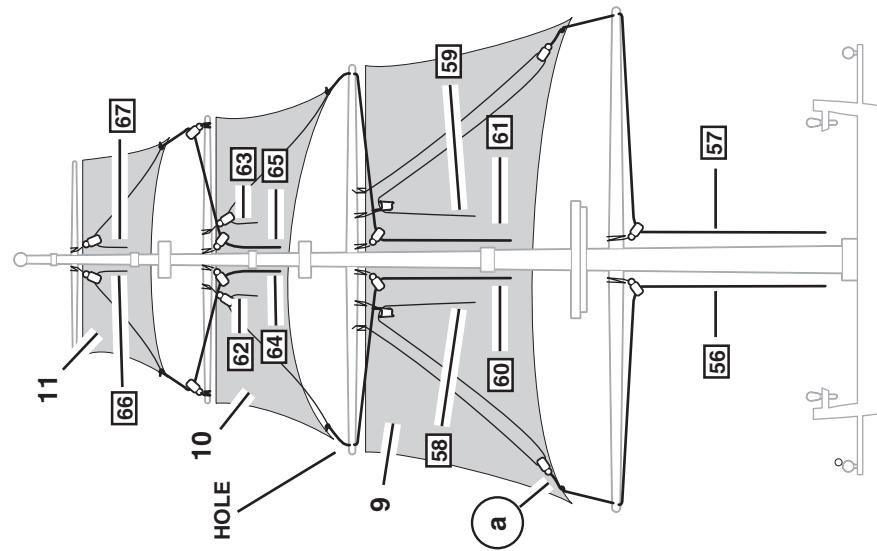

**SI VOUS SOUHAITEZ DONNER UNE APPARENCE VIEILLIE AUX VOILES, APPLIQUER UNE COUCHE DILUÉE DE PEINTURE GRISE CLAIRE. UTILISER MODÉRÉMÉNT PUISQUE CERTAINS DILUANTS PEUVENT CRAQUELER LE PLASTIQUE. DES SURBRILLANCES PEUVENT ÊTRE ATTENTES EN APPLICATIONS PAR PETITES COUCHES SUR LES RÉGIONS AVEC UN CHIFFON DOUX OU UN PAPIER AVANT QUE LA PEINTURE AIT SÉCHÉE.
UTILISER LE MATERIEL QUI DÉPASSE AUTOUR DES VOILES POUR EXPÉRIMENTER AFIN D'OBTENIR L'EFFET VOULU.**

SI DESEA DAR A LAS VELAS UNA APARIENCIA CURTIDA, APLIQUE UNA FINA CAPA DILUIDA DE PINTURA COLOR GRIS CLARO. USAR CON MODERACIÓN, YA QUE ALGUNOS DILUYENTES PUEDEN TENDER A ROMPER EL PLÁSTICO. LOS REFLEJOS SE PUEDEN OBTENER AL RETOCAR LAS ÁREAS CON UN PAÑO O TEJIDO SUAVE ANTES DE QUE LA PINTURA SE HAYA SECADO. UTILICE EL EXCESO DE MATERIAL ALREDEDOR DE LAS VELAS PARA EXPERIMENTAR A FIN DE OBTENER EL EFECTO DESEADO.
